To whom it may concern

Our company has been using Fluitec's technology with great success. We incorporate Fluitec's RULER and MPC testing into our oil analysis programs. We use their ESP technology for varnish mitigation. However it is their Boost products that we use most regularly to clean up lube oil systems. To date, we have used Fluitec's Boost products in over 200 machines, ranging from hydraulic systems to turbine and compressor systems. We have found that Boost VR works quicker than advertised and we notice improvements to valve response time in hydraulic systems in less than a week.

Fluitec are world leaders in their respective market and I don't hesitate to recommend their products to you.

Please let me know if you have any further questions.

Best regards,

**Doug Muennich, CLS, OMA**
